FAR EASTERN UNIVERSITY DR. NICANOR REYES SCHOOL OF MEDICINE ALUMNI FOUNDATION

is a not-for-profit organization of 2700+ alumni physicians throughout the United States. Established 34 years ago, FEUDNRSM Alumni Foundation missions are focused on educational, charitable, humanitarian, community and civic services here in the country, in the Philippines, and at the FEU-Nicanor Reyes Medical Foundation Institute of Medicine (West Fairview, Quezon City).

SCIENTIFIC CONVENTION: Three comprehensive, accredited half-day programs that cover a broad spectrum of updates and current trends in medicine, designed not only for the primary practitioners but also for the specialists highlight the event. This continuing medical education activity has been planned and implemented with the Essential Areas and Policies of the Accreditation Council for Continuing Medical Education (ACCME), provided by the Philippine Medical Association in Chicago which is accredited by the ACCME to provide continuing medical education meeting for physicians and takes responsibility for the content, quality, and scientific integrity of this CME activity. It meets the criteria for 14 credit hours of the Category I ACCME Physicians' Recognition Award for the American Medical Association. The objectives of the scientific seminar are to offer a review of and an update on common medical and surgical problems, focusing on cardiology, endocrinology, infectious diseases, anesthesia, plastic surgery, malpractice, and miscellaneous topics of current interest. Since the CME meetings are held only in the morning, there is plenty of time for fellowship, camaraderie, and reminiscing for the rest of the day.

HONOREES: The honorees of the reunion in 2014 will be led by the members of the Class8 Emerald Jubilarians, Class6 Golden Jubilarians and Class8 Silver Jubilarians. During the Grand ReunionSaturday dinner dance, the attending jubilarians are presented, first in slides the way they were in the medical school, then in person - the way they are now. The alumni night will recognize other honorees, namely: Class8 Sapphire Jubilarians, Class8 Ruby Jubilarians, Class6 Coral Jubilarians, Class6 Pearl Jubilarians, and Class8 (20th anniversary), Class8 (15th anniversary), and Class8 (10th anniversary) celebrants. Members of these Classes are enjoined to attend in full force. If members of these Classes, or any Class, wish to have separate functions or to get together during the reunion, the Alumni Foundation will help with any arrangements. The more classmates you have, the merrier; however, the quality of your enjoyment does not depend only on your "old" friends and classmates. The enthusiasm and spirit of the attendees are generally infectious. The occasion, the place, and the company tend to your having a great time.

EXHIBITS: We have allowed pharmaceutical companies and specialty boutiques to have a show and display. To encourage artistic talents of our alumni, friends and families, there will be a museum/art exposition of their works (e.g. photography, water colors, oil paintings, etc), along with submitted abstracts for poster exhibit presentation.

CLINICOPATHOLOGIC CONFERENCE

CLINICAL ABSTRACT  A 37-year-old previously healthy, G3P3, married female with no significant past medical history, except for irritable bowel syndrome, presented at an urgent care center because of abdominal pain in the right upper quadrant initially, later extended to the whole abdomen. It was constant, dull and graded 7/10. She was diagnosed with a urinary tract infection and was started on Cipro which shortly was stopped for a negative urine culture. Because the pain did not improve she went back to the urgent center. The patient also continued to have fevers 102°F, associated with mild nausea, but no emesis. No chills. The abdomen/ pelvis CT scan revealed a possible appendiceal abscess. She was transferred to Morris Hospital ER for further evaluation and management. On admission the pain was well controlled. No nausea. But she felt anxious about the possibility of surgery.

PAST MEDICAL HISTORY  Irritable bowel syndrome, diagnosed by symptoms. No endoscopy performed and no other surgical history. Not interested in conception, never tried to become pregnant, sexually active requiring condoms, no dysmenorrhea, and no sexually transmitted infections. ALLERGIES  No known drug allergies. HOME MEDICATIONS  None. SOCIAL HISTORY  No smoking, alcohol use, or illicit drug use. FAMILY HISTORY  Noncontributory. REVIEW OF SYSTEMS  Anxious but the rest of the review of systems negative.

PHYSICAL EXAMINATION  GENERAL  Awake, alert, oriented x3 in no apparent respiratory distress. VITAL SIGNS  temperature 99.4°F, pulse 104, respiratory rate 18, blood pressure 120/79, and pulse oximetry 96% on room air. HEENT  Head is atraumatic, normocephalic. Pupils are equal, round and reactive to light and accommodation. Extraocular movements are intact. Oropharynx clear. LUNGS  Clear to auscultation bilaterally. HEART  S1, S2 present, regular rate and rhythm. ABDOMEN  Bowel sounds present. Soft, mild tenderness in her right lower quadrant, but no rebound, rigidity, or guarding. EXTREMITIES  No clubbing, cyanosis, or edema. NEURO  No focal deficit. PSYCHIATRIC  Anxious.

LABORATORY DATA  White blood cell count 28.3, hemoglobin 12.8, platelets 366, neutrophils 77%. BMP normal. Liver function tests within normal limits. Serum pregnancy test negative.

RADIOLOGY REVIEW  Abdomen/ pelvis CT scan showed ruptured appendix with possible abscess. HOSPITALIST  (1) Ruptured appendix with possible abscess. Start IV Zosyn, IV pain medications, n.p.o., IV fluids, and surgery on consult. (2) Anxiety - IV Ativan p.r.n. to help with the anxiety. (3) Deep vein thrombosis prophylaxis with SCDs. Further recommendations to follow.

SURGICAL CONSULT  Probable ruptured appendicitis with loculated walled off abscess. Discussed the findings with the patient and husband, and their options. Consultation with infectious specialist for antibiotic coverage.

INFECTIOUS CONSULT  Recommended Zosyn 4.5 grams IV q 8 and ciprofloxacin 400 mg IV q 12. Also outpatient IV antibiotics possibly later. Blood culture results. Ultrasound/ fluoroscopy-guided left arm PICC line placement. Concern was Enterobacteriaceae organisms, anaerobes and Bacteroides. Antibiotics covered anaerobic gram-negative bacilli and aerobic gram-negative bacilli.

FINE-NEEDLE ASPIRATION CYTOLOGY  CT scan images redemonstrated the multilocular abscess/ air-fluid collection in the right lower quadrant with bowel loops draped around. About 15 mL of thick purulent material was drained and decreased abscess fluid volume. The gram stain exhibited numerous leukocytes, many gram+ cocci in chains, many gram+ cocci in pairs, rare gram- bacilli, and few gram+ bacilli. There no growth on the aerobic culture. The anaerobic organisms were Bacteroides fragilis, beta-lactamase + Prevotella buccae, light growth of Microaerophilis streptococcus and gamma hemolytic Streptococcus, Enterococcus faecalis (susceptible to ampicillin, linezolid, daptomycin, penicillin and vancomycin).

A diagnostic procedure was performed.
